PROFESSIONAL SUMMARY

B.Tech Information Technology graduate with practical experience supporting cloud infrastructure and CI/CD pipelines. Built and maintained Jenkins pipelines integrated with GitHub, automated infrastructure provisioning on AWS using Terraform, and monitored EC2 health with CloudWatch and SNS alerting. Comfortable in Linux environments with Python/Bash scripting, and working knowledge of Docker and Kubernetes fundamentals. Looking to contribute to a Cloud/DevOps team by supporting deployment automation, monitoring, troubleshooting, and infrastructure documentation.

TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, IAM, Security Groups, CloudWatch, SNS)

Infrastructure as Code: Terraform (init, validate, plan, apply)

Containers & Orchestration: Docker (working knowledge), Kubernetes (basics)

CI/CD & Version Control: Jenkins, Git, GitHub, automated pipelines

Linux & Scripting: Linux (Ubuntu), Python, Bash/Shell, SSH, SCP

Monitoring & Alerting: Amazon CloudWatch, Amazon SNS

Web Servers: Apache

Database: MySQL

PROJECTS

Automated Infrastructure & Application Deployment Pipeline using Jenkins, Terraform and AWS

- Integrated GitHub with Jenkins to automatically trigger the CI/CD pipeline on changes to the dev branch.
- Built a Terraform-based Infrastructure as Code (IaC) pipeline with initialization, validation, planning, manual approval, and AWS EC2 deployment stages.
- Automated application deployment to Ubuntu EC2 using SSH and SCP, followed by an Apache restart to serve the updated application.
- Implemented a repeatable deployment workflow that reduces manual infrastructure and application deployment steps.

Automated CI/CD Pipeline using Jenkins and GitHub

- Integrated GitHub with Jenkins using webhooks to trigger automated builds and deployments on every code push.
- Built and validated a CI/CD pipeline covering build, test, and deploy stages for continuous, repeatable deployment to AWS EC2.
- Eliminated manual deployment steps from the release process, directly supporting reliable pipeline delivery.

AWS EC2 Monitoring and Alerting using CloudWatch and SNS

- Monitored AWS EC2 instance health and performance using Amazon CloudWatch, configuring CPU utilization alarms to flag infrastructure issues proactively.
- Set up real-time email notifications via Amazon SNS to support fast incident awareness and reduce time-to-detection.

EDUCATION

B.Tech, Information Technology — Kumaraguru College of Technology

CGPA: 7.32

HSC: 91% | SSLC: 89%

SOFT SKILLS

Problem Solving • Communication • Teamwork • Analytical Thinking • Quick Learner

LANGUAGES

English • Tamil
